

DECLARATION ON THE THEORETICAL LIFETIME OF LORY

To whom it may concern,

Lory is a product invented and produced exclusively by the company Anthon. In terms of its theoretical lifetime, specifications have changed in line with trends present on the market.

Anthon would like to point out that Lory features an all-metal construction which theoretically does not degrade through time and that its evolution never included any constituent parts experiencing ageing.

The below theoretical lifetime specification currently applies to all Lory specimen produced and branded by Anthon. This specification may be subject to changes in the future.

"Lifetime is set by the date of production and is theoretically unlimited. Service time starts with the date of first use and depends on frequency and mode of application, on environment where it is used (e.g. marine, cave, corrosive atmosphere), and on mechanical wear and damage. It is therefore very difficult to determine the expected service time of a particular device. Its due retirement is therefore left to user's regular examinations and competent person's annual inspections."

Izola, 18th March 2019.
